male length 5 3/4 in
eyes dark brown, upper
mandible black lower
mandible lip black
rest about white, legs
purple black stomach
contents small insects

1.12.11 White faced Bobin. Female. length 6½ in. eyes grey. bill black. tail & lower mandible transparent white legs pale yellow stomach contents remains of small beetles & insects

I have only seen one pair of these birds they are very quiet & I have only once heard them call, a short hard tchee, tchee, tchee. when watching them, they would often fly to within a few feet of me & clinging to the side of a box a few feet from the ground

+ Her first visit to another tree, only on two occasions have I seen them on a horizontal limb. The habit of clinging to the side of a tree is similar to that of the Yellow bellied Sapsucker in Victoria.

Box packed 14.12.11
Box 1 Nest of White faced Robin.

Nest taken by Boy Vidgen. Probably a Berryone

Nest of Broad billed

Flycatcher Melaiorhis

Nest & Eggs one
many birds.
